GateMate FPGA Technology

GateMate™ FPGA

new

Suitable from university projects up to high volume applications

Supported by:
Federal Ministry for Economic Affairs and Energy
on the basis of a decision by the German Bundestag

Overview

The GateMate™ FPGA family of Cologne Chip AG addresses all application requirements of small to medium size FPGAs. Logic capacity, power consumption, package size and PCB compatibility are best in class. GateMate™ FPGAs combine these features with lowest cost in industry making the devices well suited from University projects to high volume applications. Because of the outstanding circuit size/cost ratio, new applications now can use the benefits of FPGAs.

All this is based on a novel FPGA architecture combining Central Programmable Elements (CPE) with a smart routing engine. The CPE architecture allows an efficient building of arbitrarily-sized multipliers. Memory aware applications can use block RAMs with bit widths of 1 to 80 bits.

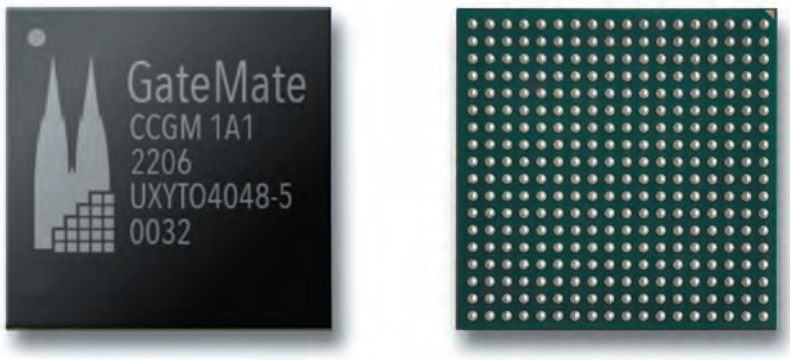
General Purpose IOs (GPIOs) can use different voltage levels from 1.2 to 2.5 Volt. All GPIOs can be configured as single-ended or LVDS differential pairs. Furthermore a high speed SerDes interface is available.

FPGA designs are synthesized using the Yosys framework. The Cologne Chip P&R software maps and implements the design into GateMate™ FPGA.

A Static Timing Analysis (STA) is also performed and gives evidence about critical paths and the overall performance of a design. The design can be simulated using Verilog netlist and SDF timing extraction.

The devices are manufactured using Globalfoundries™ 28 nm SLP (Super Low Power) process. Due to manufacturing in Europe, there is no danger of trade restrictions or high taxation.

Complimentary design conversion service



FBGA 324 ball 15x15 mm with 0.8 mm ball pitch package of **GateMate™ CCGM1A1**

GateMate FPGA Technology

designed and manufactured in Germany

GateMate™ Features

- Logic capacity from 40.000 to more than a million LUT-4 equivalent cells
- DPSRAM 1.280 Mbit
- Novel architecture with new programmable element (CPE)
- CPE consists of LUT tree with 8 inputs
- 3 operation areas: low power, economy, speed
- FPGA in ball grid package for low size and high pin count
- Design conversion service free of charge for GateMate™ customers
- Only 2 signal layers on PCB necessary
- Low configuration bit count
- Very fast configuration using 4 bit SPI interface up to 100 MHz
- No excessive start-up currents
- Only two supply voltages needed, that can be applied in any order
- Multiple clocking schemas
- Dual-ported Block RAMs with 1-80 bits data width, also configurable as FIFO
- Multipliers with arbitrary factor sizes implementable
- SerDes 2.5 Gb/s
- General Purpose IOs (GPIO) configurable as single-ended or differential (LVDS)
- Pullup/Pulldown resistors configurable
- Support for ADC and DAC with additional IP cores
- Core voltage depending on application mode: 0.9 V, 1.0 V, 1.1 V
- Globalfoundries™ 28 nm SLP (Super Low Power) processMade in Europe
- Easy synthesis using the Yosys framework
- GateMate™ Place&Route with automatic clock Skew analysis and fixing
- Static Timing Analysis for performance evaluation
- Available in different size versions (see table)

1) CPEs have 2x4 or 8 inputs connected to a LUT tree

2) Each CPE can be used as 2x2 Multiplier tile

3) Block RAM can have a data width of 1-80 bits
