Contents

1 Overview

This document contains the test report and the measurement results for the multi-port Basic Rate Controller ICs HFC-4S and HFC-8S of Cologne Chip.

HFC-4S and HFC-8S have successfully passed all layer 1 conformance tests according to the CTR 3 specification.

The ISDN S/T conformance test has been made at the test laboratory for telecom interfaces of the TÜV Rheinland Product Safety in Cologne, Germany in November 2002 and February 2003. The TÜV labs are a certified body for Telecom Approvals. All tests were made using a Tektronix K 1403 conformance test equipment. The test results and measurement results shown in this document were saved from the test equipment on February 4th, 2004.

Test Laboratory

Name:	TÜV Rheinland Product Safety GmbH

2 Output impedance

V30-12.4

Test A: Output impedance when transmitting a binary one in state F3, restricted power at 32 V.

Conformance PASSED
Measurement finished. Expected TAV-count reached.

30-12.8

Test B: Output impedance when transmitting a binary zero, positive pulses into a 50 Ω load, restricted power at 32 V.

Double pulses into 50 Ω (R+,R-,R+-), isolated pulses (R+) w. loop.

Conformance PASSED

R(+/-) = 0.000000 Ω	R(+) = 0.000000 Ω	R(-) = 23.859312 Ω

Measurement finished. Expected TAV-count reached.

V30-12.12

Test B: Output impedance when transmitting a binary zero, negative pulses into a 50 Ω load, restricted power at 32 V.

Double pulses into 50 Ω (R+,R-,R+-), isolated pulses (R-) w. loop.

Conformance PASSED

R(+/-) = 0.000000 Ω	R(+) = 23.815840 Ω	R(-) = 0.000000 Ω

Measurement finished. Expected TAV-count reached.

V30-12.16

Test B: Output impedance when transmitting a binary zero, positive pulses into a 400 Ω load, restricted power at 32 V.

Double pulses into 400 Ω (R+,R-,R+-), isolated pulses (R+) w. loop.

Conformance PASSED

R(+/-) = 0.000000 Ω	R(+) = 0.000000 Ω	R(-) = 27.564171 Ω

Measurement finished. Expected TAV-count reached.

V30-12.20

Test B: Output impedance when transmitting a binary zero, negative pulses into a 400 Ω load, restricted power at 32 V.

Double pulses into 400 Ω (R+,R-,R+-), isolated pulses (R-) w. loop.

Conformance PASSED

R(+/-) = 0.000000 Ω	R(+) = 27.461323 Ω	R(-) = 0.000000 Ω

Measurement finished. Expected TAV-count reached.

3   Pulse shape

V30-13.4

Pulse shape and amplitude for positive pulses, restricted power at 32 V.

Multi Periodic Sampling (MPS), 12 Bit/24 MHz and 1st double pulse, 12 Bit/16 MHz (#).

Conformance PASSED
Measurement finished. Expected TAV-count reached.

V30-13.8

Pulse shape and amplitude for negative pulses, restricted power at 32 V.

Multi Periodic Sampling (MPS), 12 Bit/24 MHz and 1st double pulse, 12 Bit / 16 MHz (#).

Conformance PASSED
Measurement finished. Expected TAV-count reached.

V30-13.12

Test A: Voltage on a 400 Ω load (pulse shape) for positive pulses, restricted power at 32 V.

Multi Periodic Sampling (MPS), 12 Bit/24 MHz.

Conformance PASSED
Measurement finished. Expected TAV-count reached.

V30-13.16

Test A: Voltage on a 400 Ω load (pulse shape) for negative pulses, restricted power at 32 V.

Multi Periodic Sampling (MPS), 12 Bit/24 MHz.

Conformance PASSED
Measurement finished. Expected TAV-count reached.

V30-13.20

Test B: Voltage on a $5.6\,\Omega$ load (pulse shape) for positive pulses, restricted power at 32 V.

Multi Periodic Sampling (MPS), $12\,\text{Bit}/24\,\text{MHz}$.

Conformance PASSED
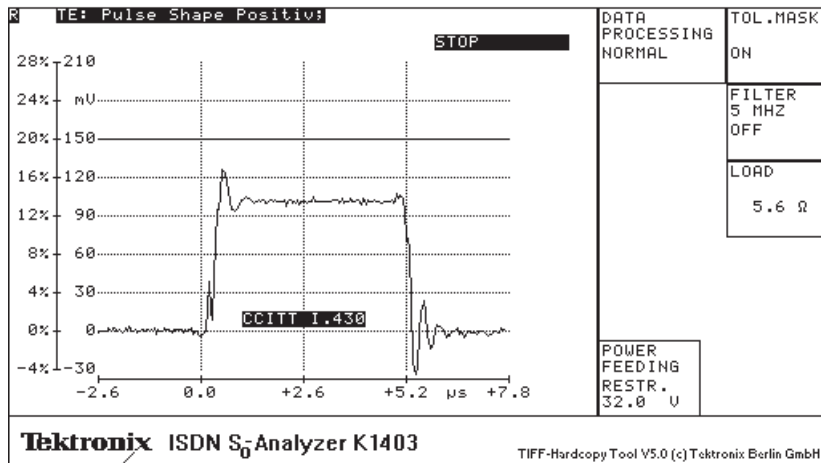

Measurement finished. Expected TAV-count reached.

V30-13.24

Test B: Voltage on a $5.6\,\Omega$ load (pulse shape) for negative pulses, restricted power at 32 V.

Multi Periodic Sampling (MPS), $12\,\text{Bit}/24\,\text{MHz}$.

Conformance PASSED
Measurement finished. Expected TAV-count reached.

4 Pulse amplitude

V30-14.1

Pulse amplitude, normal power at 42 V.

Multi Periodic Sampling (MPS), 12 Bit/16 MHz.

Conformance PASSED

$\Delta U_+/U_{nom} = -5.321217\%$	$\Delta U_-/U_{nom} = -5.471198\%$

Measurement finished. Expected TAV-count reached.

V30-14.2

Pulse amplitude, normal power at 24 V

Multi Periodic Sampling (MPS), 12 Bit / 16 MHz.

Conformance PASSED

$\Delta U_+/U_{nom} = -5.254133\%$	$\Delta U_-/U_{nom} = -5.474194\%$

Measurement finished. Expected TAV-count reached.

V30-14.4

Pulse amplitude, restricted power at 32 V

Multi Periodic Sampling (MPS), 12 Bit / 16 MHz.

Conformance PASSED

$\Delta dU_+/U_{nom} = -5.233407\%$	$\Delta U_-/U_{nom} = -5.494912\%$

Measurement finished. Expected TAV-count reached.

5 Pulse unbalance of an isolated couple of pulses

V30-14.5

Pulse unbalance of an isolated couple of pulses, normal power at 42 V.

Multi Periodic Sampling (MPS), 12 Bit/16 MHz, digital integration of 1st or 2nd double pulse of INFO.

Conformance PASSED

$$\Delta f / F_{nom} = -0.076706\%$$

Measurement finished. Expected TAV-count reached.

V30-14.6

Pulse unbalance of an isolated couple of pulses, normal power at 24 V.

Multi Periodic Sampling (MPS), 12 Bit/16 MHz, digital integration of 1st or 2nd double pulse of INFO.

Conformance PASSED

$$\Delta f / F_{nom} = -1.219496\%$$

Measurement finished. Expected TAV-count reached.

V30-14.8

Pulse unbalance of an isolated couple of pulses, restricted power at 32 V.

Multi Periodic Sampling (MPS), 12 Bit/16 MHz, digital integration of 1st or 2nd double pulse of INFO.

Conformance PASSED

$$\Delta f / F_{nom} = -1.482631\%$$

Measurement finished. Expected TAV-count reached.

6 Transmitter output longitudinal conversion loss

V30-15.1

Transmitter output longitudinal conversion loss in state F3, normal power at 42 V.

Conformance PASSED

Measurement finished. Expected TAV-count reached.

V30-15.2

Transmitter output longitudinal conversion loss in state F3, normal power at 24 V.

Conformance PASSED

Measurement finished. Expected TAV-count reached.

V30-15.3

Transmitter output longitudinal conversion loss in state F3, restricted power at 42 V.

Conformance PASSED

Measurement finished. Expected TAV-count reached.

V30-15.4

Transmitter output longitudinal conversion loss in state F3, restricted power at 32 V.

Conformance PASSED
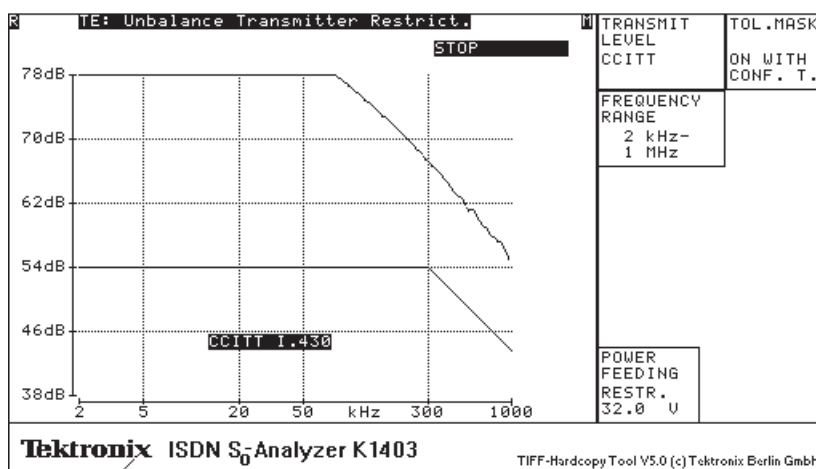

Measurement finished. Expected TAV-count reached.

7   Receiver input impedance

V30-16.4

Test A: Receiver input impedance in state F3, restricted power at 32 V.

Conformance PASSED
Measurement finished. Expected TAV-count reached.

8   Receiver longitudinal conversion loss

V30-18.1U

Receiver unbalance about earth (longitudinal conversion loss) in state F3, normal power at 42 V.

Conformance PASSED

Measurement finished. Expected TAV-count reached.

V30-18.2U

Receiver unbalance about earth (longitudinal conversion loss) in state F3, normal power at 24 V.

Conformance PASSED

Measurement finished. Expected TAV-count reached.

V30-18.3U

Receiver unbalance about earth (longitudinal conversion loss) in state F3, restricted power at 42 V.

Conformance PASSED

Measurement finished. Expected TAV-count reached.

V30-18.4U

Receiver unbalance about earth (longitudinal conversion loss) in state F3, restricted power at 32 V.

Conformance PASSED
Measurement finished. Expected TAV-count reached.

9 Input to output offset

9.1 Config. I: Binary ones, different jitter

V30-11.4a

Input to output offset, point to point configuration (high cap. cable with 6 dB attenuation) with an input sequence of continuous frames with all binary ones in D-, D-Echo and both B-channels, restricted power at 32 V.

config. I, jitter 5 Hz / 0,5 UI

Conformance PASSED

$t_{min} = -2.346371\%$	$t_{max} = 2.053616\%$	$t_{ava} = -0.346393\%$

Measurement finished. Expected TAV-count reached.

V30-11.4b

Input to output offset, point to point configuration (high cap. cable with 6 dB attenuation) with an input sequence of continuous frames with all binary ones in D-, D-Echo and both B-channels, restricted power at 32 V.

config. I, jitter 20 Hz / 0,125 UI

Conformance PASSED

$t_{min} = -2.346371\%$	$t_{max} = 2.053616\%$	$t_{ava} = -1.546359\%$

Measurement finished. Expected TAV-count reached.

V30-11.4c

Input to output offset, point to point configuration (high cap. cable with 6 dB attenuation) with an input sequence of continuous frames with all binary ones in D-, D-Echo and both B-channels, restricted power at 32 V.

config. I, jitter 50 Hz / 0,05 UI

Conformance PASSED

$t_{min} = -2.146405\%$	$t_{max} = 1.853604\%$	$t_{ava} = -0.546405\%$

Measurement finished. Expected TAV-count reached.

V30-11.4d

Input to output offset, point to point configuration (high cap. cable with 6 dB attenuation) with an input sequence of continuous frames with all binary ones in D-, D-Echo and both B-channels, restricted power at 32 V.

config. I, jitter 2015 Hz / 0,05 UI

Conformance PASSED

$t_{min} = -3.946393\%$	$t_{max} = 2.053616\%$	$t_{ava} = -1.946384\%$

Measurement finished. Expected TAV-count reached.

9.2   Config. I: Octet `0x0AA`, different jitter

V30-11.24a

Input to output offset, point to point configuration (high cap. cable with 6 dB attenuation) with an input sequence of continuous frames with the octet `0x0AA` in both B-channels and binary ones in the D-and D-Echo channels, restricted power at 32 V.

config. I, jitter 5 Hz / 0,5 UI

Conformance PASSED

$t_{min} = -2.146405\%$	$t_{max} = 1.853604\%$	$t_{ava} = -1.346393\%$

Measurement finished. Expected TAV-count reached.

V30-11.24b

Input to output offset, point to point configuration (high cap. cable with 6 dB attenuation) with an input sequence of continuous frames with the octet `0x0AA` in both B-channels and binary ones in the D-and D-Echo channels, restricted power at 32 V.

config. I, jitter 20 Hz / 0,125 UI

Conformance PASSED

$t_{min} = -1.546384\%$	$t_{max} = 2.053616\%$	$t_{ava} = 0.053616\%$

Measurement finished. Expected TAV-count reached.

V30-11.24c

Input to output offset, point to point configuration (high cap. cable with 6 dB attenuation) with an input sequence of continuous frames with the octet 0x0AA in both B-channels and binary ones in the D-and D-Echo channels, restricted power at 32 V.

config. I, jitter 50 Hz / 0,05 UI

Conformance PASSED

$t_{min} = -1.546384\%$	$t_{max} = 2.053616\%$	$t_{ava} = 0.453641\%$

Measurement finished. Expected TAV-count reached.

V30-11.24d

Input to output offset, point to point configuration (high cap. cable with 6 dB attenuation) with an input sequence of continuous frames with the octet 0x0AA in both B-channels and binary ones in the D-and D-Echo channels, restricted power at 32 V.

config. I, jitter 2015 Hz / 0,05 UI

Conformance PASSED

$t_{min} = -3.346371\%$	$t_{max} = 1.853604\%$	$t_{ava} = -1.746372\%$

Measurement finished. Expected TAV-count reached.

9.3   Config. I: Binary zeros, different jitter

V30-11.44a

Input to output offset, point to point configuration (high cap. cable with 6 dB attenuation) with an input sequence of continuous frames with all binary zeroes in D-, D-Echo and both B-channels, restricted power at 32 V.

config. I, jitter 5 Hz / 0,5 UI

Conformance PASSED

$t_{min} = -1.946393\%$	$t_{max} = 2.053616\%$	$t_{ava} = -0.346393\%$

Measurement finished. Expected TAV-count reached.

V30-11.44b

Input to output offset, point to point configuration (high cap. cable with 6 dB attenuation) with an input sequence of continuous frames with all binary zeroes in D-, D-Echo and both B-channels, restricted power at 32 V.

config. I, jitter 20 Hz / 0,125 UI

Conformance PASSED

$t_{min} = -1.946393\%$	$t_{max} = 2.053616\%$	$t_{ava} = -1.146381\%$

Measurement finished. Expected TAV-count reached.

V30-11.44c

Input to output offset, point to point configuration (high cap. cable with 6 dB attenuation) with an input sequence of continuous frames with all binary zeroes in D-, D-Echo and both B-channels, restricted power at 32 V.

config. I, jitter 50 Hz / 0,05 UI

Conformance PASSED

$t_{min} = -2.146405\%$	$t_{max} = 1.453641\%$	$t_{ava} = -1.346393\%$

Measurement finished. Expected TAV-count reached.

V30-11.44d

Input to output offset, point to point configuration (high cap. cable with 6 dB attenuation) with an input sequence of continuous frames with all binary zeroes in D-, D-Echo and both B-channels, restricted power at 32 V.

config. I, jitter 2015 Hz / 0,05 UI

Conformance PASSED

$t_{min} = -5.546376\%$	$t_{max} = 2.053616\%$	$t_{ava} = -0.746371\%$

Measurement finished. Expected TAV-count reached.

9.4 Config. I: $2^{19} - 1$ PRBS, different jitter

V30-11.64a

Input to output offset, point to point configuration (high cap. cable with 6 dB attenuation) with an input sequence of continuous frames with a $2^{19} - 1$ PRBS in D-, D-Echo and both B-channels, restricted power at 32 V.

config. I, jitter 5 Hz / 0,5 UI

Conformance PASSED

$t_{min} = -1.946393\%$	$t_{max} = 2.853604\%$	$t_{ava} = 0.453641\%$

Measurement finished. Expected TAV-count reached.

V30-11.64b

Input to output offset, point to point configuration (high cap. cable with 6 dB attenuation) with an input sequence of continuous frames with a $2^{19} - 1$ PRBS in D-, D-Echo and both B-channels, restricted power at 32 V.

config. I, jitter 20 Hz / 0,125 UI

Conformance PASSED

$t_{min} = -1.946393\%$	$t_{max} = 2.853604\%$	$t_{ava} = 0.053616\%$

Measurement finished. Expected TAV-count reached.

V30-11.64c

Input to output offset, point to point configuration (high cap. cable with 6 dB attenuation) with an input sequence of continuous frames with a $2^{19} - 1$ PRBS in D-, D-Echo and both B-channels, restricted power at 32 V.

config. I, jitter 50 Hz / 0,05 UI

Conformance PASSED

$t_{min} = -2.146405\%$	$t_{max} = 2.653592\%$	$t_{ava} = -0.546405\%$

Measurement finished. Expected TAV-count reached.

V30-11.64d

Input to output offset, point to point configuration (high cap. cable with 6 dB attenuation) with an input sequence of continuous frames with a $2^{19} - 1$ PRBS in D-, D-Echo and both B-channels, restricted power at 32 V.

config. I, jitter 2015 Hz / 0,05 UI

Conformance PASSED

$t_{min} = -2.946393\%$	$t_{max} = 2.653592\%$	$t_{ava} = 0.253629\%$

Measurement finished. Expected TAV-count reached.

9.5   Config. II: Binary ones, different jitter

V30-11.8a

Input to output offset, short passive bus configuration (high cap. cable with $2\,\mu$s delay) with 8 TEs (including the UUT-TE) clustered at the far end of the bus with an input sequence of continuous frames with all binary ones in D-, D-Echo and both B-channels, restricted power at 32 V.

config. II, jitter 5 Hz / 0,5 UI

Conformance PASSED

$t_{min} = 4.788018\%$	$t_{max} = 8.388015\%$	$t_{ava} = 7.188031\%$

Measurement finished. Expected TAV-count reached.

V30-11.8b

Input to output offset, short passive bus configuration (high cap. cable with $2\,\mu$s delay) with 8 TEs (including the UUT-TE) clustered at the far end of the bus with an input sequence of continuous frames with all binary ones in D-, D-Echo and both B-channels, restricted power at 32 V.

config. II, jitter 20 Hz / 0,125 UI

Conformance PASSED

$t_{min} = 0.788022\%$	$t_{max} = 8.388015\%$	$t_{ava} = 7.188031\%$

Measurement finished. Expected TAV-count reached.

V30-11.8c

Input to output offset, short passive bus configuration (high cap. cable with $2\,\mu$s delay) with 8 TEs (including the UUT-TE) clustered at the far end of the bus with an input sequence of continuous frames with all binary ones in D-, D-Echo and both B-channels, restricted power at 32 V.

config. II, jitter 50 Hz / 0,05 UI

Conformance PASSED

$t_{min} = 0.788022\%$	$t_{max} = 7.988021\%$	$t_{ava} = 7.188031\%$

Measurement finished. Expected TAV-count reached.

V30-11.8d

Input to output offset, short passive bus configuration (high cap. cable with $2\,\mu$s delay) with 8 TEs (including the UUT-TE) clustered at the far end of the bus with an input sequence of continuous frames with all binary ones in D-, D-Echo and both B-channels, restricted power at 32 V.

config. II, jitter 2015 Hz / 0,05 UI

Conformance PASSED

$t_{min} = 2.388026\%$	$t_{max} = 8.388015\%$	$t_{ava} = 5.188033\%$

Measurement finished. Expected TAV-count reached.

9.6   Config. II: Octet `0x0AA`, different jitter

V30-11.28a

Input to output offset, short passive bus configuration (low cap. cable with $2\,\mu$s delay) with 8 TEs (including the UUT-TE) clustered at the far end of the bus, with an input sequence of continuous frames with the octet `0x0AA` in both B-channels and binary ones in the D- and D-Echo channels, restricted power at 32 V.

config. II, jitter 5 Hz / 0,5 UI

Conformance PASSED

$t_{min} = 2.388026\%$	$t_{max} = 8.388015\%$	$t_{ava} = 4.788014\%$

Measurement finished. Expected TAV-count reached.

V30-11.28b

Input to output offset, short passive bus configuration (low cap. cable with $2\,\mu$s delay) with 8 TEs (including the UUT-TE) clustered at the far end of the bus, with an input sequence of continuous frames with the octet 0x0AA in both B-channels and binary ones in the D- and D-Echo channels, restricted power at 32 V.

config. II, jitter 20 Hz / 0,125 UI

Conformance PASSED

$t_{min} = -0.011967\%$	$t_{max} = 8.388015\%$	$t_{ava} = 6.388017\%$

Measurement finished. Expected TAV-count reached.

V30-11.28c

Input to output offset, short passive bus configuration (low cap. cable with $2\,\mu$s delay) with 8 TEs (including the UUT-TE) clustered at the far end of the bus, with an input sequence of continuous frames with the octet 0x0AA in both B-channels and binary ones in the D- and D-Echo channels, restricted power at 32 V.

config. II, jitter 50 Hz / 0,05 UI

Conformance PASSED

$t_{min} = 0.588020\%$	$t_{max} = 8.188012\%$	$t_{ava} = 4.588012\%$

Measurement finished. Expected TAV-count reached.

V30-11.28d

Input to output offset, short passive bus configuration (low cap. cable with $2\,\mu$s delay) with 8 TEs (including the UUT-TE) clustered at the far end of the bus, with an input sequence of continuous frames with the octet 0x0AA in both B-channels and binary ones in the D- and D-Echo channels, restricted power at 32 V.

config. II, jitter 2015 Hz / 0,05 UI

Conformance PASSED

$t_{min} = -0.211970\%$	$t_{max} = 8.188012\%$	$t_{ava} = 6.188014\%$

Measurement finished. Expected TAV-count reached.

9.7   Config. II: Binary zeros, different jitter

V30-11.48a

Input to output offset, short passive bus configuration (high cap. cable with $2\,\mu$s delay) with 8 TEs (including the UUT-TE) clustered at the far end of the bus, with an input sequence of continuous frames with all binary zeroes in D-, D-Echo and both B-channels, restricted power at 32 V.

config. II, jitter 5 Hz / 0,5 UI

Conformance PASSED

$t_{min} = 0.788022\%$	$t_{max} = 8.388015\%$	$t_{ava} = 6.388017\%$

Measurement finished. Expected TAV-count reached.

V30-11.48b

Input to output offset, short passive bus configuration (high cap. cable with $2\,\mu$s delay) with 8 TEs (including the UUT-TE) clustered at the far end of the bus, with an input sequence of continuous frames with all binary zeroes in D-, D-Echo and both B-channels, restricted power at 32 V.

config. II, jitter 20 Hz / 0,125 UI

Conformance PASSED

$t_{min} = 4.388024\%$	$t_{max} = 8.388015\%$	$t_{ava} = 5.588027\%$

Measurement finished. Expected TAV-count reached.

V30-11.48c

Input to output offset, short passive bus configuration (high cap. cable with $2\,\mu$s delay) with 8 TEs (including the UUT-TE) clustered at the far end of the bus, with an input sequence of continuous frames with all binary zeroes in D-, D-Echo and both B-channels, restricted power at 32 V.

config. II, jitter 50 Hz / 0,05 UI

Conformance PASSED

$t_{min} = -0.611989\%$	$t_{max} = 8.188012\%$	$t_{ava} = 6.988029\%$

Measurement finished. Expected TAV-count reached.

V30-11.48d

Input to output offset, short passive bus configuration (high cap. cable with $2\,\mu$s delay) with 8 TEs (including the UUT-TE) clustered at the far end of the bus, with an input sequence of continuous frames with all binary zeroes in D-, D-Echo and both B-channels, restricted power at 32 V.

config. II, jitter 2015 Hz / 0,05 UI

Conformance PASSED

$t_{min} = -0.011967\%$	$t_{max} = 8.388015\%$	$t_{ava} = 5.588027\%$

Measurement finished. Expected TAV-count reached.

9.8 Config. II: $2^{19} - 1$ PRBS, different jitter

V30-11.68a

Input to output offset, short passive bus configuration (high cap. cable with $2\,\mu$s delay) with 8 TEs (including the UUT-TE) clustered at the far end of the bus with an input sequence of continuous frames with a $2^{19} - 1$ PRBS in D-, D-Echo and both B-channels, restricted power at 32 V.

config. II, jitter 5 Hz / 0,5 UI

Conformance PASSED

$t_{min} = 0.788022\%$	$t_{max} = 8.388015\%$	$t_{ava} = 4.788014\%$

Measurement finished. Expected TAV-count reached.

V30-11.68b

Input to output offset, short passive bus configuration (high cap. cable with $2\,\mu$s delay) with 8 TEs (including the UUT-TE) clustered at the far end of the bus with an input sequence of continuous frames with a $2^{19} - 1$ PRBS in D-, D-Echo and both B-channels, restricted power at 32 V.

config. II, jitter 20 Hz / 0,125 UI

Conformance PASSED

$t_{min} = -0.411986\%$	$t_{max} = 8.388015\%$	$t_{ava} = 7.188031\%$

Measurement finished. Expected TAV-count reached.

V30-11.68c

Input to output offset, short passive bus configuration (high cap. cable with $2\,\mu$s delay) with 8 TEs (including the UUT-TE) clustered at the far end of the bus with an input sequence of continuous frames with a $2^{19} - 1$ PRBS in D-, D-Echo and both B-channels, restricted power at 32 V.

config. II, jitter 50 Hz / 0,05 UI

Conformance PASSED

$t_{min} = 0.588020\%$	$t_{max} = 8.188012\%$	$t_{ava} = 7.388022\%$

Jitter characteristics when transmitting INFO 3, short passive bus configuration (high cap. cable with $2\,\mu$s delay) with 8 TEs (including the UUT-TE) clustered at the far end of the bus with an input sequence of continuous frames with a $2^{19} - 1$ PRBS in D-, D-Echo and both B-channels, restricted power at 32 V.

Weighted and spectral, config. II, +basic unit: Peak to peak

$UI(pp) = 5.700000\%$	$UI(rms) = 1.100000\%$	$UI(pp-Hold) = 5.700000\%$

Measurement finished. Expected TAV-count reached.

11.3 Config. IV: Different input sequences

V30-10.20

Jitter characteristics when transmitting INFO 3, ideal configuration (direct connection TE to NT) with an input sequence of continuous frames with all binary ones in D-, D-Echo and both B-channels, restricted power at 32 V.

Weighted and spectral, config. IV, +basic unit: Peak to peak

$UI(pp) = 4.900000\%$	$UI(rms) = 1.000000\%$	$UI(pp-Hold) = 4.900000\%$

Measurement finished. Expected TAV-count reached.

V30-10.40

Jitter characteristics when transmitting INFO 3, ideal configuration (direct connection TE to NT) with an input sequence of 40 frames with continuous octets of 0x0AA in both B-channels an continuous ones in the D- and D-Echo channels followed by 40 frames with continuous binary zeroes in D-, D-Echo and both B-channels, restricted power at 32 V.

Weighted and spectral, config. IV, basic unit: Peak to peak

$UI(pp) = 4.700000\%$	$UI(rms) = 0.900000\%$	$UI(pp-Hold) = 4.700000\%$

Measurement finished. Expected TAV-count reached.

V30-10.60

Jitter characteristics when transmitting INFO 3, ideal configuration (direct connection TE to NT) with an input sequence of continuous frames with a $2^{19} - 1$ PRBS in D-, D-Echo and both B-channels, restricted power at 32 V.

Weighted and spectral, config. IV, basic unit: Peak to peak

$UI(pp) = 5.000000\%$	$UI(rms) = 1.000000\%$	$UI(pp-Hold) = 5.100000\%$

Measurement finished. Expected TAV-count reached.

11.4   Config. IIIa: Different input sequences

V30-10.12

Jitter characteristics when transmitting INFO 3,

short passive bus configuration (high cap. cable with $2\,\mu$s delay) with 7 TEs clustered at the far end of the bus, and the UUT-TE adjacent to the signal source with an input sequence of continuous frames with all binary ones in D-, D-Echo and both B-channels, restricted power at 32 V.

Weighted and spectral, config. IIIa, +basic unit: Peak to peak

$UI(pp) = 4.900000\%$	$UI(rms) = 1.000000\%$	$UI(pp-Hold) = 5.000000\%$

Measurement finished. Expected TAV-count reached.

V30-10.32

Jitter characteristics when transmitting INFO 3, short passive bus configuration (high cap. cable with $2\,\mu$s delay) with 7 TEs clustered at the far end of the bus, and the UUT-TE adjacent to the signal source with an input sequence of 40 frames with continuous octets of 0x0AA in both B-channels an continuous ones in the D- and D-Echo channels followed by 40 frames with continuous binary zeroes in D-, D-Echo and both B-channels, restricted power at 32 V.

Weighted and spectral, config. IIIa, +basic unit: Peak to peak

$UI(pp) = 5.000000\%$	$UI(rms) = 0.900000\%$	$UI(pp-Hold) = 5.100000\%$

Measurement finished. Expected TAV-count reached.

V30-10.52

Jitter characteristics when transmitting INFO 3, short passive bus configuration (high cap. cable with $2\,\mu$s delay) with 7 TEs clustered at the far end of the bus, with the UUT-TE adjacent to the signal source, with an input sequence of continuous frames with a $2^{19} - 1$ PRBS in D-, D-Echo and both B-channels, restricted power at 32 V.

Weighted and spectral, config. IIIa, +basic unit: Peak to peak

$UI(pp) = 5.500000\%$	$UI(rms) = 1.100000\%$	$UI(pp-Hold) = 5.800000\%$

Measurement finished. Expected TAV-count reached.

11.5 Config. IIIb: Different input sequences

V30-10.16

Jitter characteristics when transmitting INFO 3, short passive bus configuration (low cap. cable with $2\,\mu$s delay) with 7 TEs clustered at the far end of the bus, and the UUT-TE adjacent to the signal source with an input sequence of continuous frames with all binary ones in D-, D-Echo and both B-channels, restricted power at 32 V.

Weighted and spectral, config. IIIb, +basic unit: Peak to peak

$UI(pp) = 4.900000\%$	$UI(rms) = 1.000000\%$	$UI(pp-Hold) = 5.000000\%$

Measurement finished. Expected TAV-count reached.

V30-10.36

Jitter characteristics when transmitting INFO 3, short passive bus configuration (low cap. cable with $2\,\mu$s delay) with 7 TEs clustered at the far end of the bus, and the UUT-TE adjacent to the signal source with an input sequence of 40 frames with continuous octets of 0x0AA in both B-channels an continuous ones in the D- and D-Echo channels followed by 40 frames with continiuous binary zeroes in D-, -Echo and both B-channels, restricted power at 32 V.

Weighted and spectral, config. IIIb, +basic unit: Peak to peak

$UI(pp) = 5.000000\%$	$UI(rms) = 0.900000\%$	$UI(pp-Hold) = 5.000000\%$

Measurement finished. Expected TAV-count reached.

V30-10.56

Jitter characteristics when transmitting INFO 3, short passive bus configuration (low cap. cable with $2\,\mu$s delay) with 7 TEs clustered at the far end of the bus, with the UUT-TE adjacent to the signal source, with an input sequence of continuous frames with a $2^{19} - 1$ PRBS in D-, D-Echo and both B-channels, restricted power at 32 V.

weighted and spectral, config. IIIb, +basic unit: Peak to peak

$UI(pp) = 5.600000\%$	$UI(rms) = 1.100000\%$	$UI(pp-Hold) = 5.800000\%$

Measurement finished. Expected TAV-count reached.
